

NexaFlow - Detailed Public FAQ

Synthetic knowledge base for RAG, semantic search, chunking, retrieval, embeddings and access-control testing

Dataset notes

This document intentionally contains many realistic questions, concrete limits, prices, retention periods, roles, feature differences, and cross-topic facts. NexaFlow is fictional; all company names, policies, contacts, prices, and domains are synthetic.

Total FAQ entries: 200

Sections: 20

Intended access level: Public / Guest

Document version: 1.0

Last updated: 30 August 2026

Table of Contents

1. About NexaFlow - 10 questions
2. Registration and Accounts - 10 questions
3. Plans and Pricing - 10 questions
4. Billing and Payments - 10 questions
5. Projects, Tasks, and Workflows - 10 questions
6. Automation - 10 questions
7. Files and Storage - 10 questions
8. Search and Retrieval - 10 questions
9. Integrations and API - 10 questions
10. Security - 10 questions
11. Privacy and Data Protection - 10 questions
12. Roles and Permissions - 10 questions
13. Notifications and Communication - 10 questions
14. Support and Service Levels - 10 questions
15. Backups, Recovery, and Availability - 10 questions
16. Data Import, Export, and Migration - 10 questions
17. AI Features - 10 questions
18. Troubleshooting - 10 questions

19. Account Closure and Cancellation - 10 questions

20. Miscellaneous - 10 questions

1. About NexaFlow

Q1. What is NexaFlow?

Answer: NexaFlow is a fictional cloud-based workflow and collaboration platform designed for small and medium-sized businesses. It combines task management, document sharing, lightweight CRM features, automation rules, dashboards, and team communication in one workspace. This FAQ is a synthetic dataset created for software testing and retrieval-augmented generation experiments.

Q2. Who is NexaFlow designed for?

Answer: NexaFlow is primarily designed for teams with 5 to 500 employees. Typical users include consulting firms, agencies, software teams, operations departments, sales teams, customer-support teams, and internal project offices.

Q3. Is NexaFlow a real company?

Answer: No. NexaFlow is a fictional company and product created only as a realistic example knowledge base. Any names, prices, limits, contact addresses, policies, and product features in this document are synthetic.

Q4. Where is NexaFlow available?

Answer: The service is presented as globally available, except in countries or regions where local law would prohibit access. The fictional primary hosting regions are the European Union, the United States, and Singapore.

Q5. What languages does NexaFlow support?

Answer: The interface supports English, German, French, Spanish, Czech, Polish, Italian, Dutch, and Portuguese. English is the default language. Knowledge-base content may not be translated at the same time as the main interface.

Q6. Does NexaFlow offer a mobile application?

Answer: Yes. Mobile applications are available for Android and iOS in this fictional dataset. The mobile apps support tasks, comments, approvals, notifications, file viewing, contact records, and basic dashboard access. Advanced administration and workflow design are only available in the web application.

Q7. Can NexaFlow be used without installing software?

Answer: Yes. The full product can be accessed in a modern web browser. NexaFlow officially supports the latest two major versions of Chrome, Edge, Firefox, and Safari.

Q8. Does NexaFlow work offline?

Answer: The mobile application provides limited offline access to recently opened tasks, notes, and selected files. Changes are synchronized after the device reconnects. Workflow automation, search, dashboards, and administrative changes require an internet connection.

Q9. What is a workspace?

Answer: A workspace is the top-level environment that contains an organization's members, teams, projects, files, automations, customer records, permissions, integrations, and billing settings. A company may operate one or multiple workspaces.

Q10. Can one user belong to several workspaces?

Answer: Yes. A single NexaFlow account can belong to multiple independent workspaces. Permissions, billing, and data are isolated between workspaces unless an authorized integration explicitly exchanges information.

2. Registration and Accounts

Q11. How do I create a NexaFlow account?

Answer: A user creates an account with an email address, name, password, and acceptance of the Terms of Service. Business users may also be invited by a workspace administrator. Email verification is required before the account can create automations or invite additional members.

Q12. Is a credit card required to create an account?

Answer: No credit card is required for the 14-day trial or the Free plan. A valid payment method is required when a workspace upgrades to a paid subscription.

Q13. How long is the free trial?

Answer: The standard trial lasts 14 calendar days. It includes most Professional-plan features for up to 10 users but excludes enterprise-only controls such as SAML SSO, SCIM provisioning, audit-log exports, custom retention policies, and dedicated support.

Q14. Can the trial be extended?

Answer: A trial may be extended once by up to 7 additional days when requested before the original trial expires. Extensions are discretionary and must be approved by the fictional NexaFlow support team.

Q15. What happens when the trial ends?

Answer: If no paid subscription is selected, the workspace enters read-only mode for 7 days. During this period users can sign in, view existing content, and export eligible data, but they cannot create or modify records. After the read-only period, the workspace is downgraded to the Free plan if it meets Free-plan limits; otherwise it remains restricted until an administrator removes excess users or data.

Q16. Can I sign up with Google or Microsoft?

Answer: Yes. Users can authenticate with Google or Microsoft accounts. Workspace administrators may later restrict sign-in methods or require SSO on eligible Enterprise subscriptions.

Q17. What are the password requirements?

Answer: Passwords must contain at least 10 characters and at least three of the following categories: uppercase letters, lowercase letters, numbers, and symbols. Passwords cannot match the user's email address or be one of the platform's commonly compromised passwords.

Q18. Can I change my account email address?

Answer: Yes. A user can change the primary email address from Profile Settings. The new address must be verified. If the workspace uses enforced SSO or managed-domain restrictions, the user may need an administrator to approve the change.

Q19. Can two people share one user account?

Answer: No. User accounts are personal and should not be shared. Shared credentials make audit trails unreliable and may violate workspace security policies. Teams should create separate accounts for each individual.

Q20. Can I permanently delete my account?

Answer: Yes. A user can request account deletion from Profile Settings. If the user owns a workspace, ownership must first be transferred or the workspace must be deleted. Account deletion enters a 14-day recovery window before final removal from active systems.

3. Plans and Pricing

Q21. What subscription plans are available?

Answer: NexaFlow has four fictional plans: Free, Starter, Professional, and Enterprise. Free is intended for very small teams, Starter adds collaboration and reporting, Professional adds advanced automation and integrations, and Enterprise adds centralized identity, security, compliance, and support features.

Q22. What is included in the Free plan?

Answer: The Free plan supports up to 5 active users, 3 projects, 2 GB of total file storage, 250 automation actions per month, 30 days of activity history, and community support. It does not include custom roles, external guest controls, advanced dashboards, API write access, or SSO.

Q23. How much does the Starter plan cost?

Answer: The synthetic Starter price is EUR 12 per user per month when billed monthly, or EUR 10 per user per month when billed annually. Starter requires at least 3 paid seats.

Q24. How much does the Professional plan cost?

Answer: The synthetic Professional price is EUR 24 per user per month when billed monthly, or EUR 20 per user per month when billed annually. Professional includes unlimited projects, 100 GB of storage per workspace, advanced dashboards, API access, and 10,000 automation actions per month.

Q25. How is Enterprise pricing calculated?

Answer: Enterprise pricing is quote-based and depends on seat count, required hosting region, support level, compliance requirements, security features, and contract duration. The fictional minimum Enterprise commitment is 50 seats.

Q26. Do you charge per active user or invited user?

Answer: Paid plans bill for active member seats assigned during the billing period. Pending invitations are not charged until accepted. Suspended users do not consume a paid seat after the next daily license reconciliation, but their historical content remains in the workspace.

Q27. Are guest users billed?

Answer: On Professional, each paid seat includes up to two external guest seats. Additional guest seats are billed at 25 percent of the normal per-user price. Enterprise contracts may use different guest pricing.

Q28. Is there a nonprofit or education discount?

Answer: Eligible nonprofit organizations and accredited educational institutions may receive a 30 percent discount on annual Starter or Professional subscriptions. Verification must be renewed every two years.

Q29. Do annual plans have a discount?

Answer: Yes. Standard annual billing is approximately 16 to 17 percent cheaper than paying the equivalent plan monthly. Annual subscriptions are prepaid for the full contract year.

Q30. Can I change plans at any time?

Answer: Upgrades take effect immediately and are prorated for the remainder of the billing period. Downgrades normally take effect at the next renewal date. A downgrade may require the workspace to reduce users, storage, projects, or features to the limits of the lower plan.

4. Billing and Payments

Q31. Which payment methods are accepted?

Answer: Monthly Starter and Professional subscriptions accept major credit and debit cards. Annual contracts may also be paid by bank transfer after invoice approval. Enterprise contracts are normally invoiced by bank transfer.

Q32. Which currencies are supported?

Answer: Self-service billing supports EUR, USD, and GBP. Enterprise invoices may additionally be issued in SGD, CAD, AUD, or CHF when specified in the contract.

Q33. When am I charged?

Answer: Monthly subscriptions are charged on the same calendar day each month as the original paid subscription start date. Annual subscriptions are charged at the start of each annual term. If a month does not contain the original billing day, billing occurs on the last day of that month.

Q34. How does prorated billing work?

Answer: When seats are added or the subscription is upgraded, NexaFlow calculates the unused portion of the current plan and the remaining portion of the new charges. The resulting prorated amount appears on the next invoice or may be charged immediately for significant upgrades.

Q35. What happens if my payment fails?

Answer: NexaFlow retries a failed card payment up to four times over 10 days. Workspace administrators receive notifications after each failed attempt. If payment remains unresolved after the grace period, the workspace may be placed in read-only mode.

Q36. Can I download invoices?

Answer: Yes. Workspace owners and billing administrators can download PDF invoices from Settings > Billing > Invoices. Invoices remain available for at least seven years in this synthetic policy.

Q37. Can I add company information and VAT details to invoices?

Answer: Yes. Billing administrators can configure the legal company name, billing address, tax identification number, VAT number, purchase-order reference, and billing contact before the next invoice is generated.

Q38. Does NexaFlow charge VAT?

Answer: Tax treatment depends on the customer's billing country, tax status, and valid tax identifiers. In this fictional dataset, eligible EU business customers with a verified VAT number may be invoiced under reverse-charge rules where legally applicable.

Q39. Can I get a refund?

Answer: Monthly subscription charges are generally non-refundable after the billing date. Annual plans may be eligible for a full refund if cancellation is requested within 14 days of the initial annual purchase and the workspace has not used more than 20 percent of the included annual automation quota.

Q40. What happens if I remove users during a billing cycle?

Answer: Removing or suspending users does not normally create a cash refund for the current month. The available seat can be reassigned to another user. The lower seat count is reflected at the next renewal unless the workspace has a contracted minimum.

5. Projects, Tasks, and Workflows

Q41. What is a project in NexaFlow?

Answer: A project is a structured container for tasks, milestones, files, discussions, forms, and project-specific permissions. Projects can be private, team-visible, or workspace-visible depending on the plan and administrator settings.

Q42. How many projects can I create?

Answer: Free workspaces can create up to 3 active projects. Starter supports up to 50 active projects. Professional and Enterprise support unlimited active projects, subject to fair-use and storage limits.

Q43. What task fields are available?

Answer: Standard task fields include title, description, assignee, followers, status, priority, start date, due date, estimated effort, labels, checklist, attachments, and comments. Professional and Enterprise plans can add custom fields such as numbers, dates, dropdowns, people, currencies, URLs, and formulas.

Q44. Can a task have more than one assignee?

Answer: A standard task has one primary assignee to preserve clear accountability. Additional collaborators can be added as followers. Professional workspaces may create sub-tasks with different assignees or enable multi-assignee tasks as an optional workspace feature.

Q45. Can I create recurring tasks?

Answer: Yes. Starter and higher plans support recurring tasks. Recurrence can be daily, weekly, monthly, yearly, or based on a custom interval. The next task can be created on a fixed schedule or only after the previous occurrence is completed.

Q46. Can tasks depend on other tasks?

Answer: Yes. Professional and Enterprise plans support task dependencies. A task may be marked as blocked by one or more predecessor tasks, and workflow rules can prevent status changes until blockers are completed.

Q47. Does NexaFlow support approvals?

Answer: Yes. Approval steps are available on Professional and Enterprise. An approval can require one approver, any one member of a group, all members of a group, or a specified number of approvals before a workflow continues.

Q48. Can I create project templates?

Answer: Yes. Starter includes up to 10 saved project templates. Professional and Enterprise allow unlimited templates and can include task structures, custom fields, forms, automations, permissions, and default dashboards.

Q49. What is a workflow status?

Answer: A workflow status is a stage that represents the state of a task or record, such as New, In Progress, Waiting for Customer, Approved, Rejected, or Done. Administrators can configure allowed transitions between statuses on Professional and Enterprise plans.

Q50. Can completed projects be archived?

Answer: Yes. Archived projects remain searchable by authorized users but are removed from default active views. Archived projects do not count toward active-project limits, although their files continue to count toward storage usage.

6. Automation

Q51. What is an automation action?

Answer: An automation action is one operation performed by a rule, such as changing a status, assigning a user, sending an email, creating a task, updating a field, posting a webhook, or copying a record. A workflow execution may consume several actions.

Q52. How many automation actions are included?

Answer: Free includes 250 actions per month, Starter includes 2,000, Professional includes 10,000, and Enterprise includes a negotiated allowance starting at 100,000 actions per month.

Q53. What happens if I exceed my automation limit?

Answer: Automations pause when the monthly quota is exhausted unless the workspace has enabled paid overage. Manual actions continue to work. Professional administrators can purchase additional blocks of 10,000 actions for a fictional price of EUR 25 per block.

Q54. Can automations send emails?

Answer: Yes. Automations can send templated notification emails to workspace members and, on Professional or Enterprise, to approved external addresses. Bulk marketing email is not permitted through the automation feature.

Q55. Can automations call external APIs?

Answer: Professional and Enterprise plans support outbound webhooks and HTTP requests to administrator-approved endpoints. Secrets can be stored in encrypted connection settings and are not displayed in workflow execution logs.

Q56. Can an automation be triggered by an incoming webhook?

Answer: Yes. Professional and Enterprise plans can create unique incoming webhook URLs. Incoming requests may create records, update tasks, or launch workflows after validation and optional shared-secret verification.

Q57. Are automation logs available?

Answer: Professional retains automation execution logs for 90 days. Enterprise retains logs for 365 days by default and may negotiate longer retention. Logs include trigger time, workflow version, status, consumed actions, and error messages.

Q58. Can I test an automation before publishing it?

Answer: Yes. The workflow editor provides a test mode that runs against sample data. Test executions are clearly marked and do not send external emails or webhooks unless the administrator explicitly enables live side effects.

Q59. Can workflows be versioned?

Answer: Professional stores the previous 20 published versions of each workflow. Enterprise stores up to 100 versions and allows administrators to export workflow definitions as JSON.

Q60. What happens if an automation fails?

Answer: Transient errors are retried up to three times with increasing delay. Permanent validation errors are not retried. Workflow owners receive a notification when repeated failures occur, and failed runs can be manually retried after correction.

7. Files and Storage

Q61. Which file types can be uploaded?

Answer: Common documents, spreadsheets, presentations, PDFs, images, text files, archives, and many media formats can be uploaded. Executable files and certain potentially dangerous script formats may be blocked by security policy.

Q62. What is the maximum file size?

Answer: Free allows individual files up to 50 MB, Starter up to 250 MB, Professional up to 2 GB, and Enterprise up to 5 GB unless a contract specifies a different limit.

Q63. How much storage is included?

Answer: Free includes 2 GB per workspace, Starter includes 20 GB, Professional includes 100 GB, and Enterprise starts at 1 TB. Additional Enterprise storage can be purchased in 1 TB increments.

Q64. Are deleted files recoverable?

Answer: Files moved to Trash can be restored for 30 days on Free and Starter, 90 days on Professional, and 180 days on Enterprise. After the recovery window, files are queued for permanent deletion.

Q65. Does NexaFlow keep file versions?

Answer: Starter stores up to 20 versions of a file, Professional stores 100 versions, and Enterprise can retain unlimited versions within the configured retention period. Free stores only the current version.

Q66. Can I preview files in the browser?

Answer: PDFs, images, common Microsoft Office files, plain text, and several video formats can be previewed without downloading. Very large files, encrypted files, or unsupported formats may require download.

Q67. Are uploaded files scanned for malware?

Answer: Yes. Uploaded files are scanned using automated malware-detection systems before they are made available to other users. Files that cannot be scanned safely may be quarantined or blocked.

Q68. Can external guests upload files?

Answer: Yes, if the project or form permissions allow it. Workspace administrators can restrict guest uploads, block specific file types, or require guest-uploaded files to be approved by an internal user.

Q69. Can files be shared with a public link?

Answer: Professional and Enterprise workspaces can create public share links if the administrator enables the feature. Links can have an expiration date, password protection, download restrictions, and optional email-domain restrictions.

Q70. Do archived files still consume storage?

Answer: Yes. Archiving content changes visibility and organization but does not reduce storage usage. Storage is released only when eligible content is permanently deleted.

8. Search and Retrieval

Q71. What content can NexaFlow search?

Answer: Search covers project names, task titles, descriptions, comments, labels, customer records, selected custom fields, and the extracted text of supported uploaded documents. Permissions are enforced so users only see results they are authorized to access.

Q72. Does search index PDF text?

Answer: Yes. Search can index text contained in standard text-based PDF documents. Scanned image-only PDFs require OCR support, which is available on Professional and Enterprise in this fictional feature set.

Q73. How quickly does new content appear in search?

Answer: Most newly created tasks and comments appear within several seconds. Large uploaded files may take up to five minutes to index. During heavy system load, indexing may take longer.

Q74. Can I search by exact phrase?

Answer: Yes. Quotation marks can be used to search for an exact phrase, such as "quarterly revenue report". Search also supports filters for project, creator, assignee, file type, date range, status, and label.

Q75. Does search use semantic matching?

Answer: Professional and Enterprise workspaces can enable semantic search. Semantic search uses vector representations to find conceptually related content even when the exact query words are not present.

Q76. Does semantic search ignore permissions?

Answer: No. Permission filtering is applied before or during retrieval so a user cannot receive search results from content they are not allowed to access.

Q77. Can search results be exported?

Answer: Professional users can export filtered task and record results to CSV. Enterprise administrators can use the API or reporting export to retrieve larger result sets.

Q78. Why can I not find a recently uploaded file?

Answer: The most common reasons are that indexing is still in progress, the file type is unsupported, the file is encrypted, OCR is required for a scanned PDF, or the user does not have permission to view the file's project.

Q79. Are deleted items searchable?

Answer: Items in Trash are excluded from normal search. Authorized administrators can search the Trash area separately during the applicable recovery period.

Q80. Can administrators search all workspace content?

Answer: Not automatically. Administrators still respect project-level access by default. Enterprise workspaces can assign a compliance or eDiscovery role that permits organization-wide searches for authorized legal or security purposes.

9. Integrations and API

Q81. Which integrations are supported?

Answer: The fictional integration catalog includes Google Drive, OneDrive, Dropbox, Slack, Microsoft Teams, Gmail, Outlook, HubSpot, Salesforce, Jira, GitHub, GitLab, Zapier, Make, and generic webhooks. Availability varies by plan.

Q82. Does NexaFlow have a public API?

Answer: Yes. Professional and Enterprise plans include REST API access. Starter provides read-only API access for reporting, while Free does not include API access.

Q83. How is API authentication handled?

Answer: Users can create personal access tokens on Professional. Enterprise additionally supports OAuth 2.0 applications and service accounts. Tokens can be scoped and revoked by administrators.

Q84. What is the API rate limit?

Answer: Professional workspaces are limited to 600 requests per minute per workspace. Enterprise starts at 3,000 requests per minute and can negotiate higher limits. Short bursts above the limit may receive HTTP 429 responses.

Q85. Does the API support webhooks?

Answer: Yes. Applications can subscribe to events such as task.created, task.updated, task.completed, comment.created, file.uploaded, contact.updated, and project.archived.

Q86. How long does NexaFlow retry failed webhooks?

Answer: Failed webhook deliveries are retried for up to 24 hours using exponential backoff. The webhook is automatically disabled after 50 consecutive delivery failures until an administrator re-enables it.

Q87. Can I restrict integrations?

Answer: Yes. Professional administrators can enable or disable integrations by application. Enterprise can additionally restrict OAuth scopes, approved domains, service accounts, and outbound webhook destinations.

Q88. Can an integration access private projects?

Answer: Only if the authorizing user or service account has access to those projects and the integration scope permits the requested data. Integrations do not automatically bypass project permissions.

Q89. Is there a sandbox environment for API testing?

Answer: Enterprise customers may request a separate sandbox workspace. The sandbox has independent data and credentials and is refreshed manually, not automatically copied from production.

Q90. Where can developers find API documentation?

Answer: In this synthetic dataset the developer documentation is represented by the placeholder domain developers.nexaflow.example. The address is intentionally non-functional because NexaFlow is fictional.

10. Security

Q91. Is data encrypted?

Answer: Yes. Data is encrypted in transit using TLS 1.2 or later and encrypted at rest using industry-standard server-side encryption. Enterprise customers may optionally use customer-managed encryption keys for selected storage services.

Q92. Does NexaFlow support two-factor authentication?

Answer: Yes. All plans support TOTP authenticator applications. Professional and Enterprise also support WebAuthn security keys. Enterprise administrators can require multi-factor authentication for all non-SSO users.

Q93. Does NexaFlow support SSO?

Answer: SAML 2.0 and OpenID Connect SSO are Enterprise features. Supported identity providers include Microsoft Entra ID, Okta, Google Workspace, and other standards-compliant providers.

Q94. Does NexaFlow support SCIM?

Answer: Yes. Enterprise supports SCIM 2.0 for automated user provisioning and deprovisioning. SCIM can synchronize users and groups from compatible identity providers.

Q95. Are administrator actions logged?

Answer: Professional retains a security activity log for 90 days. Enterprise provides a detailed audit log retained for 365 days by default, including login events, membership changes, permission changes, exports, integration changes, and selected data-access events.

Q96. Can I restrict access by IP address?

Answer: Enterprise workspaces can configure IP allowlists for web access, API access, or administrator sessions. Emergency recovery procedures are available if an incorrect allowlist blocks all administrators.

Q97. Does NexaFlow support session timeouts?

Answer: Yes. Enterprise administrators can set idle session timeouts between 15 minutes and 24 hours and maximum session durations between 1 hour and 30 days.

Q98. How are backups protected?

Answer: Backups are encrypted and stored separately from primary application databases. Production backup access is restricted to authorized operations personnel and is logged.

Q99. Does NexaFlow run penetration tests?

Answer: In this fictional security program, independent penetration testing is performed at least annually and after major architectural changes. High-severity findings are prioritized for remediation.

Q100. How should security vulnerabilities be reported?

Answer: Security researchers should use the fictional address security@nexaflow.example. Reports should include reproduction steps, affected components, and potential impact. Researchers should avoid accessing data that does not belong to them.

11. Privacy and Data Protection

Q101. Who owns customer data?

Answer: Customers retain ownership of the content they submit to NexaFlow. NexaFlow processes that content only to provide, secure, maintain, and improve the contracted service, subject to the fictional Terms of Service and Data Processing Agreement.

Q102. Does NexaFlow sell customer data?

Answer: No. In this synthetic privacy policy, NexaFlow does not sell customer workspace content or personal data to third-party advertisers.

Q103. Where is EU customer data stored?

Answer: EU-region workspaces store primary application data in the European Union. Certain limited support, telemetry, or subprocessors may operate from other regions under appropriate contractual safeguards.

Q104. Can customers choose a data region?

Answer: Professional customers may choose EU or US hosting when creating a new paid workspace. Enterprise additionally offers Singapore hosting. Moving an existing workspace between regions requires a migration project.

Q105. Does NexaFlow provide a Data Processing Agreement?

Answer: Yes. A standard fictional DPA is available to paid customers and includes processor obligations, subprocessor terms, security measures, international transfer mechanisms, and assistance with data-subject requests.

Q106. How long is personal data retained after workspace deletion?

Answer: After a workspace deletion request, active production data is normally deleted within 30 days. Encrypted backup copies may persist for up to 90 additional days before automatic expiration, unless legal obligations require longer retention.

Q107. Can users request access to their personal data?

Answer: Yes. Requests can be submitted through the account privacy page or by contacting the fictional privacy address privacy@nexaflow.example. Identity verification may be required before data is released.

Q108. Can a company export all workspace data?

Answer: Workspace owners on paid plans can request a full export containing supported tasks, projects, comments, contacts, metadata, and files. Large exports may be split into multiple encrypted archives.

Q109. Does NexaFlow use customer content to train public AI models?

Answer: No. In this fictional policy, customer workspace content is not used to train general-purpose public AI models unless a customer explicitly opts into a separate research program.

Q110. Are subprocessors used?

Answer: Yes. Like most cloud services, NexaFlow relies on infrastructure, email, observability, support, and payment subprocessors. A current synthetic subprocessor list would be maintained on the company trust page, with advance notice for material changes on Enterprise contracts.

12. Roles and Permissions

Q111. What standard workspace roles exist?

Answer: The standard roles are Owner, Administrator, Member, and Guest. Professional and Enterprise plans can create custom roles with granular permissions.

Q112. What can the workspace owner do?

Answer: The owner controls billing ownership, workspace deletion, ownership transfer, top-level security settings, and administrator appointment. A workspace must always have at least one active owner.

Q113. What can administrators do?

Answer: Administrators can manage members, teams, projects, integrations, most security settings, and workspace configuration. Billing access can be granted separately.

Q114. What is a guest user?

Answer: A guest is an external collaborator with access only to specifically shared projects, tasks, folders, or forms. Guests cannot browse the full workspace directory unless explicitly allowed.

Q115. Can permissions be set per project?

Answer: Yes. Projects can inherit workspace defaults or define their own member list and role permissions. Enterprise workspaces can also apply access rules based on groups and identity-provider attributes.

Q116. Can a user be an administrator but not see a private project?

Answer: Yes. Administrative privileges do not necessarily provide content access. A private project can remain inaccessible to administrators unless they are added or assigned a compliance role with broader authorized access.

Q117. Can guests invite other guests?

Answer: No by default. Professional administrators may enable limited guest invitations within specific projects, but invited users still require approval before gaining access.

Q118. Can I create a read-only user?

Answer: Professional and Enterprise can create a custom role that permits viewing and commenting but prevents record creation, editing, deletion, exports, and workflow changes.

Q119. What happens to content when a user leaves the company?

Answer: Administrators can suspend or remove the account and reassign owned tasks, projects, contacts, and workflows. Historical comments and audit events retain the former user's display name for accountability.

Q120. Can permissions be reviewed in bulk?

Answer: Enterprise includes access-review reports showing users, groups, roles, project memberships, guest access, and privileged permissions. Reports can be exported as CSV for periodic certification.

13. Notifications and Communication

Q121. What notification channels are available?

Answer: Users can receive notifications in the web app, mobile app, email, Slack, or Microsoft Teams depending on configured integrations and personal preferences.

Q122. Can I disable email notifications?

Answer: Yes. Most email notifications can be disabled individually. Security alerts, billing failures, ownership changes, and other essential administrative notices may still be sent.

Q123. Can I set quiet hours?

Answer: Yes. Mobile and desktop notifications can be paused during user-defined quiet hours. Quiet hours do not delay the underlying task or automation; they only delay or suppress notification delivery.

Q124. Can I receive a daily digest?

Answer: Yes. Users can enable a morning or evening digest containing overdue tasks, upcoming deadlines, mentions, approval requests, and selected project updates.

Q125. Why am I receiving too many notifications?

Answer: Common causes include following high-volume projects, being added as a follower to many tasks, broad mention rules, or integration notifications that duplicate in-app alerts. Notification Preferences shows each enabled category and delivery channel.

Q126. Can project notifications be customized?

Answer: Yes. Users can follow all activity, mentions only, assigned-item changes, or a custom set of events for each project.

Q127. Can administrators force notifications?

Answer: Administrators may enforce a small category of security, compliance, emergency, and policy notifications. They cannot force ordinary task-comment notifications for every user.

Q128. Are email replies added back to NexaFlow?

Answer: On Starter and higher plans, replies to supported notification emails can be posted back as task comments if the message contains a valid secure reply token.

Q129. Can I mention a whole team?

Answer: Yes. Users with appropriate permission can mention a team using an @team reference. Large-team mentions may display a confirmation warning before sending notifications.

Q130. Are notification preferences synchronized across devices?

Answer: Yes. Preferences are stored at account level. Device-specific operating-system notification permissions may still differ between phones and computers.

14. Support and Service Levels

Q131. How can I contact support?

Answer: Free users have community support. Starter users can use email support. Professional includes email and in-app support. Enterprise includes priority support and may purchase a dedicated support plan. Synthetic email contacts use the non-functional domain nexaflow.example.

Q132. What are standard support hours?

Answer: Starter and Professional support operates Monday to Friday, 08:00-18:00 Central European Time, excluding public holidays. Enterprise priority support for critical incidents is available 24 hours a day, seven days a week.

Q133. What is the Professional support response target?

Answer: The fictional target is 8 business hours for normal issues and 2 business hours for high-impact incidents. These are support targets, not guaranteed resolution times.

Q134. What is the Enterprise critical-incident response target?

Answer: For Severity 1 incidents under the Premium Support add-on, the initial response target is 30 minutes, 24/7. Standard Enterprise without Premium Support has a 1-hour Severity 1 target.

Q135. How is incident severity defined?

Answer: Severity 1 means the production service is unavailable or a critical security issue affects most users with no reasonable workaround. Severity 2 is major degradation affecting important functionality. Severity 3 covers limited defects with workarounds. Severity 4 covers questions, minor defects, and feature requests.

Q136. Does NexaFlow provide an uptime SLA?

Answer: Enterprise contracts include a fictional monthly uptime commitment of 99.95 percent for core application services. Professional is operated to the same general reliability objective but does not include financial service credits.

Q137. What is excluded from the uptime calculation?

Answer: Scheduled maintenance announced in advance, customer-side internet failures, third-party systems outside NexaFlow's control, misuse of the service, and force-majeure events may be excluded according to the Enterprise SLA.

Q138. Where are service incidents published?

Answer: The fictional public status site is `status.nexaflow.example`. It would show current system health, active incidents, scheduled maintenance, and historical uptime.

Q139. How are feature requests handled?

Answer: Support records feature requests and links them to existing product ideas. Submission does not guarantee implementation or a delivery date. Enterprise customers may discuss strategic requests during business reviews.

Q140. Does NexaFlow provide onboarding help?

Answer: Professional includes self-service onboarding guides and optional paid onboarding. Enterprise includes an implementation manager for standard deployments and can purchase data migration, workflow design, and administrator training services.

15. Backups, Recovery, and Availability

Q141. How often is data backed up?

Answer: Production databases are continuously replicated and point-in-time recovery data is captured throughout the day. Full logical or storage-level backups are also generated on a scheduled basis.

Q142. What is the standard backup retention period?

Answer: The synthetic standard is 35 days for operational backups. Enterprise customers may purchase extended backup retention up to one year for selected data stores.

Q143. What are the recovery objectives?

Answer: For Enterprise, the fictional target Recovery Point Objective is 15 minutes and the target Recovery Time Objective for a regional production failure is 4 hours. These targets exclude customer-created data corruption and unsupported third-party integrations.

Q144. Can a single deleted task be restored from backup?

Answer: Users should first restore from Trash. Infrastructure backups are designed for disaster recovery and are not normally used to recover individual records. Enterprise support may provide specialized recovery assistance in exceptional cases.

Q145. Does NexaFlow operate in multiple availability zones?

Answer: Yes. Each primary hosting region uses multiple independent availability zones for application and database redundancy where supported by the cloud provider.

Q146. What happens during scheduled maintenance?

Answer: Most maintenance is performed without visible downtime. If customer impact is expected, NexaFlow provides advance notice through the status page and administrator email, normally at least 72 hours in advance.

Q147. Can customers request a disaster-recovery test report?

Answer: Enterprise customers may request the latest executive summary of disaster-recovery testing under appropriate confidentiality terms.

Q148. Are backups stored in the same region?

Answer: Primary operational backups remain within the selected data region unless the Enterprise contract explicitly specifies a cross-region disaster-recovery configuration.

Q149. How often is disaster recovery tested?

Answer: The fictional operations program performs component recovery exercises throughout the year and a formal end-to-end disaster-recovery exercise at least annually.

Q150. Does the Free plan receive the same infrastructure redundancy?

Answer: Core multi-zone production infrastructure is shared across plans. Paid plans differ primarily in contractual commitments, support, retention, security controls, and administrative features rather than basic server redundancy.

16. Data Import, Export, and Migration

Q151. Can I import data from CSV?

Answer: Yes. Starter and higher plans can import tasks, contacts, and selected custom records from CSV. The importer supports column mapping, date formats, user matching, and validation previews.

Q152. Can I import data from another project-management tool?

Answer: Professional offers guided importers for selected tools such as Trello, Asana, Monday.com, and Jira in this fictional product catalog. Unsupported systems can usually be migrated through CSV or the API.

Q153. How much data can one CSV import contain?

Answer: Starter supports up to 10,000 rows per import. Professional supports 100,000 rows. Enterprise supports larger migrations through the API or assisted migration services.

Q154. Can attachments be imported?

Answer: Yes, but large attachment migrations are best performed through assisted migration or the API. CSV imports can reference accessible file URLs when administrator security settings permit remote download.

Q155. Can I export project data?

Answer: Yes. Starter can export tasks and selected project metadata to CSV. Professional can export broader project data and files. Enterprise can request full workspace exports and automated scheduled exports.

Q156. Does export include deleted items?

Answer: Standard exports exclude Trash and permanently deleted items. Enterprise compliance exports may include items still within configured retention or legal-hold periods.

Q157. Can I schedule recurring exports?

Answer: Enterprise supports scheduled exports to approved cloud storage destinations. Professional users can automate selected report exports through the API.

Q158. How long does a full workspace export remain available?

Answer: Generated full exports remain available for download for 7 days. Download links are signed, user-specific, and may require reauthentication.

Q159. Can support migrate data for me?

Answer: Paid professional services are available for complex migrations. Scope, source-system access, data quality, volume, transformations, and validation requirements determine the fictional migration price.

Q160. Will record IDs stay the same after migration?

Answer: Internal NexaFlow record IDs are generated by the destination workspace and normally differ from source-system IDs. Original external IDs can be stored in a custom field for traceability.

17. AI Features

Q161. Does NexaFlow include AI features?

Answer: Professional and Enterprise plans include optional AI-assisted features such as summarizing long discussions, drafting task descriptions, extracting action items, semantic search, and suggesting workflow categories.

Q162. Is AI enabled by default?

Answer: Basic AI assistance may be available but must be enabled by a workspace administrator before customer content is sent to an AI processing service. Enterprise administrators can disable AI features entirely.

Q163. What data can the AI assistant access?

Answer: The assistant only retrieves content the requesting user is authorized to access. It can use workspace content relevant to the user's question, subject to feature configuration and project permissions.

Q164. Can the AI assistant access private projects?

Answer: Only when the user asking the question already has access to those projects. AI retrieval does not grant additional permissions.

Q165. Is customer data used to train the AI model?

Answer: No. Under this fictional policy, customer workspace content is not used to train shared public foundation models. Service providers may process content only to deliver the requested feature under contractual restrictions.

Q166. Can AI-generated answers be wrong?

Answer: Yes. AI-generated output may be inaccurate, incomplete, or outdated. Users should verify important business, legal, financial, security, and operational decisions against authoritative records.

Q167. Does the AI assistant cite sources?

Answer: When answering questions from workspace documents, the assistant attempts to display links or references to the records and files used for retrieval. Citation availability depends on the feature and source type.

Q168. Can administrators limit which projects AI can use?

Answer: Yes. Professional can disable AI per project. Enterprise can define broader AI-access policies by group, sensitivity label, project type, and data region.

Q169. Are AI requests logged?

Answer: Professional retains basic AI usage metadata for 30 days. Enterprise can enable detailed administrative AI audit logs, including user, timestamp, feature, referenced records, and policy decision, without necessarily storing the full generated response.

Q170. Is there a monthly AI usage limit?

Answer: Professional includes 500 AI requests per paid seat per month in this synthetic pricing model. Enterprise uses pooled organization-level quotas defined by contract.

18. Troubleshooting

Q171. Why can I not sign in?

Answer: Check that the email address is correct, the account has completed verification, and the password is valid. Managed workspaces may require Google, Microsoft, or SSO instead of password login. Too many failed attempts can temporarily lock an account for 15 minutes.

Q172. I forgot my password. What should I do?

Answer: Use the Forgot password link on the sign-in page. A reset email is valid for 60 minutes. If no email arrives, check spam folders and confirm that the address is registered and not controlled exclusively through SSO.

Q173. Why is the application slow?

Answer: Performance issues may be caused by browser extensions, poor network connectivity, very large project views, temporary service incidents, or outdated browser versions. Testing in a private browser window can help identify extension-related problems.

Q174. Why is my automation not running?

Answer: Check whether the workflow is published, the trigger conditions match the record, the monthly action quota is not exhausted, required connections are still authorized, and the workflow execution log does not show a validation error.

Q175. Why did a webhook fail?

Answer: Typical causes include an unreachable endpoint, timeout, invalid TLS certificate, HTTP error response, firewall rule, expired secret, payload validation failure, or API rate limiting at the receiving service.

Q176. Why can I not upload a file?

Answer: The file may exceed the plan's size limit, the workspace may be out of storage, the file type may be blocked, malware scanning may have quarantined it, or the user may lack upload permission in that project.

Q177. Why can I not invite another user?

Answer: The workspace may have reached its seat limit, domain restrictions may block the address, the user may already have a pending invitation, or your role may not include member-management permission.

Q178. Why are dashboard numbers different from exported CSV data?

Answer: Dashboards can use cached calculations, configured filters, time-zone conversions, or formulas that differ from raw exported fields. Most dashboards refresh within 15 minutes; manual refresh may be available.

Q179. Why did I receive a 429 API error?

Answer: HTTP 429 means the API rate limit was exceeded. Reduce request frequency, implement exponential backoff, cache unchanged data, and use bulk endpoints where available.

Q180. What information should I include in a support ticket?

Answer: Include the workspace name, affected users, approximate start time, exact error message, steps to reproduce, browser or app version, relevant record URLs or IDs, and whether the issue occurs for multiple users. Do not include passwords or secret API tokens.

19. Account Closure and Cancellation

Q181. How do I cancel a paid subscription?

Answer: A workspace owner or billing administrator can schedule cancellation from Billing Settings. Monthly plans remain active until the end of the current paid month. Annual plans remain active until the end of the prepaid annual term unless a qualifying refund applies.

Q182. Does cancellation immediately delete the workspace?

Answer: No. Cancellation stops future renewal but does not automatically delete workspace data. At the end of the paid term, the workspace is downgraded or restricted according to plan limits.

Q183. Can I reactivate a canceled subscription?

Answer: Yes. If the paid term has not ended, administrators can usually cancel the scheduled cancellation. After downgrade, the workspace can upgrade again as long as the data has not been permanently deleted.

Q184. How do I permanently delete a workspace?

Answer: Only a workspace owner can request permanent deletion. The owner must confirm the workspace name and reauthenticate. Enterprise workspaces may require a second administrator approval.

Q185. Is there a recovery period after workspace deletion?

Answer: Yes. Standard workspace deletion has a 30-day recovery window. During this time, the workspace is inaccessible to normal users but can be restored by an authorized owner after identity verification.

Q186. What happens after the 30-day recovery window?

Answer: Production data is scheduled for permanent deletion and can no longer be restored through normal support procedures. Residual encrypted backup data expires according to backup-retention schedules.

Q187. Can I export data before canceling?

Answer: Yes. Customers are encouraged to export required business data before the paid term ends. Some export features may no longer be available after a workspace is downgraded.

Q188. Will integrations stop working after cancellation?

Answer: Integrations remain active while the paid subscription is active. After downgrade, integrations that are not supported by the lower plan are disabled and their credentials are eventually revoked.

Q189. Will I receive a final invoice?

Answer: If all charges were prepaid, there may be no additional invoice. Any usage-based overages, unpaid prorated charges, or taxes are included in a final billing statement where applicable.

Q190. Can support delete my workspace for me?

Answer: Support can guide the process but normally cannot delete a workspace without verified owner authorization. This protects customers against accidental or malicious deletion requests.

20. Miscellaneous

Q191. What time zone does NexaFlow use?

Answer: Each user can select a personal time zone. Due dates without an explicit time are interpreted in the project or workspace time zone, while audit logs are stored internally in UTC and displayed in the viewer's selected time zone.

Q192. What date format is supported?

Answer: The interface supports regional date formats such as DD/MM/YYYY, MM/DD/YYYY, and YYYY-MM-DD. API timestamps use ISO 8601.

Q193. Can I use NexaFlow for regulated medical data?

Answer: Standard self-service plans are not intended for regulated medical data requiring specialized contractual protections. Enterprise customers must discuss compliance requirements before storing such data.

Q194. Can NexaFlow be used for financial records?

Answer: Yes for ordinary business workflows, subject to the customer's own compliance obligations. NexaFlow is not a bank, accounting system of record, or regulated financial custodian.

Q195. Can I white-label NexaFlow?

Answer: Enterprise customers can customize logos, login branding, email templates, and selected workspace terminology. Full removal of all NexaFlow branding is available only under a negotiated white-label agreement.

Q196. Can I use my own domain?

Answer: Enterprise can configure a custom application domain such as work.example-company.com and custom outbound email domains after DNS verification.

Q197. Does NexaFlow offer a desktop app?

Answer: Yes, fictional desktop apps for Windows and macOS provide notifications, quick capture, file opening, and a focused workspace window. The web application remains the primary interface.

Q198. What operating systems are supported by the desktop app?

Answer: The Windows app supports Windows 11 and the two most recent supported Windows 10 release branches where security updates remain available. The macOS app supports the current major macOS version and the previous two major versions.

Q199. Can I suggest a new integration?

Answer: Yes. Users can submit integration requests through the feedback portal. Popular requests are reviewed by product management, but no implementation date is guaranteed.

Q200. Where can I learn more?

Answer: Because NexaFlow is fictional, all domains and addresses in this document are placeholders. The purpose of this FAQ is to provide a realistic, structured dataset for document parsing, text chunking, embeddings, semantic search, access-control experiments, question answering, and RAG evaluation.

End of FAQ

This synthetic FAQ can be freely modified for software testing. For stronger retrieval tests, combine it with internal role-specific documents containing facts that partially overlap with this public knowledge base.
